Ohio EPA VIBI Plant Community Class (WETLANDS ONLY):

- FOREST swamp forest bog forest forest seep
- EMERGENT marsh wet meadow open bog
- SHRUB shrub swamp tall sh. bog tall sh. fen

Fit= Conf=
Fit= Conf=
Fit= Conf=

MODIFIED NATURE RESERVE CLASS*

CODE (on separate form): Wetland Fit= Conf=

COMMUNITY NAME: Disturbed Edge community

STAND SIZE

Fit= Conf=

SALINITY*

Fit= Conf=

HYDROLOGIC REGIME*

Fit= Conf=

HOMOGENEITY

- Homogeneous
- Compositional trend across the plot
- Conspicuous inclusions
- Irregular/pattern mosaic

Fit= Conf=

DISTURBANCES

Fit= Conf=

Additional notes & diagrams: (Representativeness of plot to the stand, successional status, maturity, etc.)

Plot was located on the disturbed edge of a maintained meadow. Both Green and White Ash were found in the plot. Saws left fromns as species. Canopy was Ash, Black Locust. Lots of invasives throughout the plot be sure to wear long sleeves and bring clippers. Several deer trails thru the plot. Yet browse was pretty low. Also a healthy population of poison ivy on the trees.

EXAMPLES OF PERCENT OF AREA COVERED

The following graphic can be used for various data elements to convey "Amount" or "Quantity". **NOTE:** Within any given box, each 1m² contains the same total area covered, just different sized objects.

Nested Corners

cover class	% cover	midpoint
1	solitary or few	0.0001
2	0-1%	0.005
3	1-2%	0.015
4	2-5%	0.035
5	5-10%	0.075
6	10-25%	0.175
7	25-50%	0.375
8	50-75%	0.625
9	75-95%	0.850
10	95-100%	0.975

BROWSE RATING NARRATIVE DESCRIPTION

LOW OR NONE: there is no measurable browse line AND there are very few or no plants 1-m nested quadrat and intensive module. In general, low values relate to less than 10 percent, by numbers of stems browsed.

MEDIUM LOW values include evidence of browse at about 10 percent of the stems with no significant impact to plant reproduction evident. In this rating, plants are browsed but **preferential species** are observed to be reproducing in numbers that appear normal or near-normal in comparison to low browse areas. For example, trilliums may flower and fruit, but jewelweed and arrowwood viburnum exhibit browse.

MEDIUM: browse affects greater than 10 percent and less than 25 percent of stems in the 1 m² nested quadrat and intensive module. A browse line is usually not evident or obvious for all classes and species of vegetation, but careful examination may show preferential browse and/or browse lines for some species of plants.

MEDIUM HIGH values include evidence of a browse line and 25 percent of stems browsed with very little vegetation regeneration evident. In this rating, for some species of plants, reproduction does not appear to occur or it is very severely limited.

HIGH: greater than 25 percent of the stems of plants in the 1 m² nested quadrat and intensive module **AND** a browse line is evident.

VERY HIGH values include extensive browse conditions, where the browse line is very evident **AND** almost all seedlings and herbs are severely browsed or missing. Browse line may be 5 to 6 feet in height with no or little green growth beneath.

ASH CANOPY BREAKUP CONDITION (for dead trees)				
A	B	C	D	E
<p>rank as described below:</p> <p>(if an ash receives a score of 5 (dead) under canopy condition it must also receive a breakup condition rank as described below):</p> <p>A: All main branches contain fine twigs (newly dead).</p> <p>B: Over 50% of main branches have fine twigs.</p> <p>C: Less than 50% of main branches have fine twigs.</p> <p>D: Stem still standing and tertiary main branches present.</p> <p>E: Central stem still standing.</p>				
				

ASH CANOPY CONDITION				
1	2	3	4	5
    				
<p>1. Healthy, full canopy: A healthy ash canopy is normally thinner than many other trees such as maple.</p> <p>2. Thinning canopy: There aren't as many leaves as there ought to be, but all top branches exposed to sunlight have leaves.</p> <p>3. Dead canopy: Canopy is thinning and some top branches exposed to sunlight are dead (have no leaves). Lower branches, not exposed to sunlight, die naturally and are not considered.</p> <p>4. >50% Dieback: The canopy has less than half of the leaves that should be there and/or half of the top branches are dead.</p> <p>5. Dead canopy: No leaves remain in the canopy portion of the tree. It still counts as 5 even if there are epicormic sprouts below the canopy (lowest branch) on the trunk.</p>				

DBH Measurement Rules	
	
<p>Record the number of stems/plants between 0.5-1.0 meters tall that exhibit evidence of this years deer browse.</p> <p>Record using the tally system from 1 to 10.</p> <p>•</p> <p>Record the number of stems/plants between 0.5-1.0 meters tall that exhibit evidence of this years deer browse.</p> <p>•</p> <p>Record using the tally system from 1 to 10.</p>

MICROTOPOGRAPHIC FEATURE COUNTS - Intensive modules only

卷之三

Ranks for micromobility features. Select one or select two and average the score. NOTE: If none is on a slope automatically gets ranked based on sleepiness (-1-3)

Step 1 = slight elevational grade across module (0-11)
Slope 2 = falls on slope -20°
Slope 3 = maximum sleepiness that can be safely sampled ~45

3. reduce is present in very small amounts or is more common, or low quality
7. feature is present in moderate amounts, but not of highest quality, or in small amounts of highest quality
10. feature is present in moderate or greater amounts and of highest quality

d - count for pieces with minimum 1m length

NOTE: tufted and hummocks are counted in BOTH nested quadrat corners but counts are aggregated. macro depressions = macrotopographic depressions with module. These may extend into other modules and be counted again. c.w.d. = coarse woody debris microtop. Interspersers = overall ranking of plot macrotopographic interspersion complexity using scale below

of the Chinese government in 1949. The Chinese government has been unable to collect taxes in China. See Figure 2-16.

These seedlings are often emitted as up to 1-4 m long or as 2-3 cm high in which case they would span the herb and shrub layers.

Can also include seedlings of shrubs, i.e. all shrubs <0.5m

Very tall shrubs are sometimes included in the tree stratum

Substrate (submerged)	Aquatic (submerged)
Flotating	Flotating

Herb (Field)	Herb, dwarf-shrub**, tree (seedling**)
--------------	--

Shrub (generally 0.5 to 5 m)	Tree (sapling), shrub, liana, epiphyte
------------------------------	--

Tree (generally > 5 m)	Trees (ovestory), very tall shrubs*, liana, epiphytes

an

UNKNOWN: The hydrologic regime cannot be determined from the available information.

PERMANENTLY FROZEN: Water covers the land surface at all times of the year in all years. Equivalents to Greenland's permanent

SEMIPERMANENTLY FLOODED (exposed <1/year). Surface water persists throughout the growing season in most years. Land surface is normally saturated when water level drops below soil surface. Includes Cowardin's Intermittently Exposed and Semipermanently Flooded

the U.S. where appropriate. This modifier can be applied to both welland and non-welland situations. Equivalent to Coward's *aspecifics* for use in the U.S. and Western world categories of *legal rights*, *technocratic controls*, and *market controls*.

INTERMITTENTLY FLOODED: Substrate is usually exposed, but surface water can be present for periods without detectable seasonal predictability. Inundation is not predictable to a given season and is dependent upon highly localized rain storms. This model was developed for use in the mid-West for water systems of river banks, intermittent streams and dry washes but can be used in other parts of the country.

THE COUNTRY LENDER. Open charters good for 5 years and lower rates equivalent to 5% with 5% margin fee.

characterizes floodplain upper terraces.

OCASIONALLY FLOODED: Surface water can be present for brief periods during growing season, but not in most years. Often

PERMANENTLY/SEMI-PERMANENTLY SURSTRUCTED By less than once per year. Surface water is seldom present, but substrate is saturated to surface for extended periods during the growing season. Equivalents to Cowardin's Saturated modifier.

UPLAND: Not a wetland. Very rarely flooded.

HYDROLOGIC REGIME Modified from Grossman et al. 1998. (Frequency and duration of flooding.)

PERCENT MOTTLES (USE CLASS CODES):				
Class	Code	Code	Surface Area Covered	Comments
SOIL TEXTURE	RECORD THE CODE FOR THE SOIL TEXTURE OF THE 5 CM AND 20 CM LAYERS. TO ESTIMATE TEXTURE, COLLECT A SOIL SAMPLE FROM THE APPROPRIATE LAYER AND MOISTEN IT WITH WATER TO THE CONSISTENCY OF MOLDING CLAY/WET NEWSPAPER; THE SAMPLE SHOULD BE WET ENOUGH THAT ALL OF THE PARTICLES ARE SATURATED BUT EXCESS WATER DOES NOT FREELY FLOW FROM THE SAMPLE WHEN SQUEEZED. ATTEMPT TO ROLL THE SAMPLE INTO A BALL. IF THE SOIL WILL NOT STAY IN A BALL AND HAS A GRANULAR TEXTURE, THE TEXTURE IS EITHER SANDY OR COARSE SANDY. IF THE SOIL DOES NOT FORM A BALL, SQUEEZE THE SAMPLE BETWEEN YOUR FINGERS AND ATTEMPT TO FORM A BALL. IF THE SOIL WILL NOT STAY IN A BALL AND HAS BOTH A BALL AND A RIBBON SHOULD BE CODED AS CLAYEY. SAMPLES WHICH FORM RIBBONS SHOULD BE CODED AS LOAMY. SAMPLES WHICH FORM A BALL BUT NOT A RIBBON SHOULD BE CODED AS LOAMY.			
0=Organic	1=Looamy	2=Clayey	3=Sandy	4=Coarse Sand
5=Not measured - make plot note

PLOT COORDINATES

Provide GPS coordinates at the center of the Buffer Plot (#3) at the far end of each Buffer Transect and for the Buffer Plot at the AA CENTER. Indicate the location of the plot coordinates by filling in the appropriate bubble.

If Buffer Plot 3 can not be accessed, take the coordinates at the nearest practicable location ALONG THE TRANSECT. This is important because all Buffer Plots are centered on the Buffer Transects and the coordinates will indicate the location of the transect. Fill in the "nearest practicable location" bubble, fill in the flag box, and describe where the coordinates were taken and why in the comment section below. The coordinates of the nearest practicable location can be either placed as close to the center of Plot 3 as possible or at the center of the last accessible Buffer Plot.

Location of coordinates (choose one):

PLOT COORDINATES

Provide GPS coordinates at the center of the Buffer Plot (#3) at the far end of each Buffer Transect and for the Buffer Plot at the AA CENTER. Indicate the location of the plot coordinates by filling in the appropriate bubble.

If Buffer Plot 3 can not be accessed, take the coordinates at the nearest practicable location ALONG THE TRANSECT. This is important because all Buffer Plots are centered on the Buffer Transects and the coordinates will indicate the location of the transect. Fill in the "nearest practicable location" bubble, fill in the flag box, and describe where the coordinates were taken and why in the comment section below. The coordinates of the nearest practicable location can be either placed as close to the center of Plot 3 as possible or at the center of the last accessible Buffer Plot.

Location of coordinates (choose one):

PLOT COORDINATES

Provide GPS coordinates at the center of the Buffer Plot (#3) at the far end of each Buffer Transect and for the Buffer Plot at the AA CENTER. Indicate the location of the plot coordinates by filling in the appropriate bubble.

If Buffer Plot 3 can not be accessed, take the coordinates at the nearest practicable location ALONG THE TRANSECT. This is important because all Buffer Plots are centered on the Buffer Transects and the coordinates will indicate the location of the transect. Fill in the "nearest practicable location" bubble, fill in the flag box, and describe where the coordinates were taken and why in the comment section below. The coordinates of the nearest practicable location can be either placed as close to the center of Plot 3 as possible or at the center of the last accessible Buffer Plot.

PLOT COORDINATES

Provide GPS coordinates at the center of the Buffer Plot (#3) at the far end of each Buffer Transect and for the Buffer Plot at the AA CENTER. Indicate the location of the plot coordinates by filling in the appropriate bubble.

If Buffer Plot 3 can not be accessed, take the coordinates at the nearest practicable location ALONG THE TRANSECT. This is important because all Buffer Plots are centered on the Buffer Transects and the coordinates will indicate the location of the transect. Fill in the "nearest practicable location" bubble, fill in the flag box, and describe where the coordinates were taken and why in the comment section below. The coordinates of the nearest practicable location can be either placed as close to the center of Plot 3 as possible or at the center of the last accessible Buffer Plot.

Location of coordinates (choose one):

Flag

AA CENTER N3 S3 E3 W3 Nearest practicable location (flag and comment below)

Latitude North 4 1 5 7 1 1 4 Longitude West 0 8 1 4 1 4 3 5

Park in lot on Rockers Rd (see 1:3000 map)

Lots of them here. In setting up the plot I personally
removed 30% of the them by ~~digging~~ pulling them into my
piles and putting them free from the plant. You can thank me later
